Dataset Card for SmartWilds Citizen Science

Przewalski's horse
Equus przewalskii

Sichuan takin
Budorcas taxicolor

Milu deer
Elaphurus davidianus

Visitor photographs of Przewalski's horse, Sichuan takin, and Milu (Père David's) deer, with annotation boxes.

> **Status: staging incomplete.** The source Darwin Core tables for this modality are owner-only on the cluster. Rebuild with `release/scripts/build_hf_release.py` once they are readable.

This is the citizen-science dataset of the **SmartWilds** collection. Each modality has its own dataset and DOI. They share one Darwin Core Event hierarchy rooted at `TheWilds_2025` and are joined by the SmartWilds collection.

Dataset Details

- **Curated by:** Jenna M. Kline, Anirudh Potlapally, Elizabeth G. Campolongo
- **Snapshot:** `darwin_core_latest_20261008`

Park visitors submitted photographs through a structured web form. The release distinguishes four counts, each a different unit:

Unit	Count
Raw media files in `photos_videos` (965 images, 138 videos)	1,103
Photos manually annotated	791
Curated wildlife photos	564
Darwin Core Occurrences (some photos contain several taxa)	622

Fifty of the curated photos, all from September 8, come from a Google Photos album export rather than the raw folder. `associatedMedia` and `occurrenceRemarks` say so for each of them.

The Event table has 14 rows: 1 `Project` and 13 `ObservationSession`.

Annotation method

- **Method:** manual. All 622 Occurrences are `verified by expert` (`HumanObservation`).
- **Locality:** coordinates are generalized to locality level.

Personal and sensitive information

The photos were taken by members of the public, and some may show people. **[TODO(release): confirm visitor consent / terms of submission permit redistribution; screen for identifiable people.]**

Considerations for Using the Data

- **Submissions arrive only during operating hours.** The diurnal profile is truncated by visitor schedules, not by animal activity.
- **Visitors' attention skews the taxa.** Charismatic and easily seen taxa are over-represented.

Supplemental Material

Extended inventories, the timestamp-repair methods, the standards crosswalk, validation checks, and the full defect inventory are in `SUPPLEMENTAL.md` in the study-level SmartWilds dataset. **[TODO: confirm repo URL]**
